Course 350: Kabira Transaction Switch for Testers

The Kabira Transaction Switch Solution Framework gives the basis for building high speed transaction based systems and is the benchmark development environment within the industry. This course enables students to configure flows and channels which are the heart of any Switch application. Testing is considered in depth with hands-on labs to reinforce topics taught in theory sessions.

Course Goals: To configure and test Switch applications

Course Objectives: On completion students will be able to:

- Describe the architecture of a Kabira Transaction Switch Application.
- Explain and use the Switch internal message format to create custom messages
- Use switchadmin to manage and monitor Switch
- Use Unit Test, switchtest and endpointsim to test a Switch application

Major Topics:

- Architecture
- Message Flows
- Channels
- Admin Service
- Testing Framework
- Endpoint (Channel) Simulators

Course Duration: Two days

Availability:

This course is not publicly available. To book a class contact Kabira Education Services.

Target Audience:

System testers of of Kabira Transaction Switch applications.

Prerequisites:

- Course 225: KIS Testers Workshop
