

Kabira Transaction Platform Essentials

BENEFITS

Successful implementations of systems based on the Kabira Transaction Platform (KTP) rely on the people who carry them out. This course has been designed to educate senior technical and project managers in all aspects of KTP that they require to manage a successful implementation of the platform.

The program provides introductory level learning on the technology of KTP as well as examples of good and bad fit target systems. A complete walk-through is given of a representative live system with the example project plan

Course Goals

- Students will understand the concepts and principles of the Kabira Transaction Platform
- Students will be able to identify key activities of KTP projects

A Clear Path to Technical Excellence

KABIRA COURSE 101

Audience

Anyone requiring an introduction to Kabira Transaction Platform architecture

- Technical Development Managers and System Architects requiring high level knowledge of the concepts of Kabira Transaction Platform.
- Project Managers who will be actively planning and managing projects with Kabira Transaction Platform

Prerequisites

- Awareness of object oriented analysis and Business Process Modelling (BPM) is desirable.
- Awareness of Transaction Processing concepts and techniques

Course Duration 1 day

Innovative Technology,
Innovative Learning

Course Objectives

On completion students will be able to:

- Explain the key concepts and principles of KTP and identify appropriate target business requirements e.g. Transaction Processing
- Describe the KTP Architecture and Components.
- Explain Kabira Product Architecture and its relationship with Service Oriented Architecture (SOA)
- Describe KTP High Availability
- Explain the Testing Frameworks
- List the key stages in performance evaluation and identify main tools used
- Describe the Kabira Transaction Platform development process

Major Topics

- Introduction
- Business Requirements and Kabira Transaction Platform Overview
- Kabira Transaction Platform Architecture
- Kabira Product Architecture
- KTP Service Management (Fault, Configuration, Accounting, Performance, Security)
- KTP Testing Framework
- KTP Development Process
- Walk Through of a Mediation Solution (solution overview, solution challenges,)
- Group Case Study - Sent to students prior to the course
(3 examples - 2 which fit with KTP and 1 which does not)
